PROJECTS

Project 1

Blind Spot Monitoring System Using IoT Applications

- A Blind Spot Monitoring (BSM) system using IoT (Internet of Things) applications can greatly enhance vehicle safety by detecting and alerting drivers to objects or vehicles in their blind spots.

Project 2

Service Management System

The service management system (SMS) is a software application that helps organizations manage their service requests, assignments, and tracking. It provides a centralized platform for customers to submit service requests, employees to handle assignments, and administrators to monitor the overall service workflow.
